Sequence 2182, Application US/09540236

Patent No. 6673910

GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO MORAXELLA CATARF
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.2005-001
CURRENT APPLICATION NUMBER: US/09/540,236
CURRENT FILING DATE: 2000-04-04
NUMBER OF SEQ ID NOS: 3840

  converting fructose-6P into glucosamine-6P using glutamine as
                nitrogen source.
-!- CATALYTIC ACTIVITY: L-glutamine + D-fructose 6-phosphate = glutamate + D-glucosamine 6-phosphate.
-!- SUBUNIT: Homodimer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Glucosamine--fructose-6-phosphate
aminotransferase [isomerizing].
/FIId-PRO_000135328.
Glutamine amidotransferase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GATase.
Isomerization Fru-6P.
KL -> NV (in Ref. 1).

                                                                                                                                                                                         converting fructose of into glucosamine of using glutamine as a nitrogen source (By similarity).

CATALYTIC ACTIVITY: L-glutamine + D-fructose 6-phosphate = L-glutamate + D-glucosamine 6-phosphate.

SUBUNIT: Homodimer (By similarity).

SUBCELLOLAR LOCATION: Cytoplasm (By similarity).

SIMILARITY: In the C-terminal section; belongs to the SIS family.

SIMILARITY: Contains 1 type-2 glutamine amidotransferase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0; Gaps

07-WAR-2006, entry version 12.
Glucosamine-fructose-6-phosphate aminotransferase [isomerizing]
EC 2.6.1.16) (Hexosephosphate aminotransferase) (D-fructose-6-
phosphate amidotransferase) (GFAT) (L-glutamine-D-fructose-6-
phosphate seal (Glucosamine-6-phosphate synthase).
Name-glmS; OrderedLocusNames-SPRA3700;
Salmonella paratyphi-a

restricted serovars of Salmonella enterica that cause typhoid.";
Nat. Genet. 36:1268-1274(2004).
-!- FUNCTION: Catalyzes the first step in hexosamine metabolism,
-converting fructose-6P into glucosamine-6P using glutamine as
nitrogen source (By similarity).
-!- CATALYTIC ACTIVITY: L-glutamine + D-fructose 6-phosphate = L-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Glutamine amidotransferase.
GATase (By similarity).
Gomerization Fru-6P (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       J. Bacteriol. 185:2330-2337(2003).
-!- FUNCTION: Catalyzes the first step in hexosamine metabolism, converting fructose-6P into glucosamine-6P using glutamine as nitrogen source (By similarity).
-!- CATALYTIC ACTIVITY: L-glutamine + D-fructose 6-phosphate = L-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;

-!- FUNCTION: Catalyzes the first step in hexosamine metabolism, converting fructose-6P into glucosamine-6P using glutamine as a nitrogen source (By similarity).
-!- CATALYTIC ACTIVITY: L-glutamine + D-fructose 6-phosphate = L-glutamate + D-glucosamine 6-phosphate.
-!- SUBUNIT: Homodimer (By similarity).
-!- SUBCLULIAR LOCATION: Cytoplasm (By similarity).
-!- SIMILARITY: In the C-terminal section; belongs to the SIS family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                       glutamate + D-glucosamine 6-phosphate.
SUBCELULIAR LOCATION: Cytoplasm (By similarity).
SIMILARITY: In the C-terminal section; belongs to the SIS family.
GPAT subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Erwinia carotovora subsp. atroseptica (Pectobacterium atrosepticum).

glutamate + D-glucosamine 6-phosphate.
--- SUBUNIT: Homodimer (By similarity).
--- SUBCELLULAR LOCATION: Cytoplasm (By similarity).
--- SIMILARITY: In the C-terminal section; belongs to the SIS family.
                                                                                                      -!- SIMILARITY: Contains 1 type-2 glutamine amidotransferase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GATase (By similarity). Isomerization Fru-6P (By similarity).

"Insights into the evolution of Yersinia pestis through whole-genome

romparison with Yersinia pseudotuberculosis.",

Proc. Natl. Acad. Sci. U.S.A. 101:13826-13831(2004).

-!- FUNCTION: Catalyzes the first step in haxosamine metabolism,

converting fructose-6P into glucosamine-6P using glutamine as a

nitrogen source (By similarity).

-!- CATALYTIC ACTIVITY: L-glutamine 4 D-fructose 6-phosphate = L-

glutamate + D-glucosamine 6-phosphate.

-!- SUNCELULAR LOCATION: Cytoplasm (By similarity).

-!- SIMILARITY: In the C-terminal section; belongs to the SIS family.

C. -!- SIMILARITY: Contains 1 type-2 glutamine amidotransferase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 14
B81246
Glutemaine-fructose-6-phosphate transaminase (isomerizing) (EC 2.6.1.16) NWB0031 [sim glutemaine-fructose-6-phosphate aminotransferase [misnomer]
C.Species: Naisseria meningitidis
C.Bate: 31-Mar-2000 #sequence_revision 31-Mar-2000 #text_change 09-Jul-2004
C.Accession: B81246
C.Accession: N.J.; Heidelberg, J.; Jeffries, A.C.; Nelson, K.E.; Eisen, H.Tettellin, H.; Saunders, N.J.; Heidelberg, J.; Jeffries, A.C.; Nelson, K.E.; Eisen, Hickey, E.K.; Haft, D.H.; Salzberg, S.L.; White, O.; Fleischmann, R.D.; Dougherty, E.i, H.; Qin, H.; Vamachevan, J.; Gill, J.; Scarlato, V.; Masignani, V.; Pizza, M.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       356

WPI; 2004-203380/19. N-PSDB; ADI38884 Producing glucosamine or N-acetylglucosamine by fermentation involves culturing microorganism comprising glucosamine-6-phosphate acetyltransferase, in fermentation medium, and collecting product.

Claim 5; SEQ ID NO 30; 327pp; English.

The present invention relates to a method (M1) for producing glucosamine and N-acetylglucosamine by fermentation. The method comprises (a) culturing in a fermentation medium a microorganism (I) which comprises endogenous glucosamine-6-phosphate acetyltransferase (II) and a genetic modification that increases the activity of (II), glucosamine-6-phosphate

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Producing hexosamine useful for treating arthritis by culturing cell comprising heterologous polynucleotide sequences which encode for enzymes required for blosynthetic pathway capable of synthesizing hexosamine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method of producing a hexosamine that involves providing a cell comprising polynucleotide sequences which code for enzymes required for a blosynthetic pathway capable of synthesising the hexosamine, where at least one of the polynucleotide sequences comprises a recombinant polynucleotide. The method involves transforming a cell with at least one heterologous polynucleotide coding for a polypeptide in

the transformed cell under conditions that permit the cell to translate the transformed cell under conditions that permit the cell to translate the polymucleotide into a polypeptide comprising an enzyme which is part of the biosynthetic pathway. The hexosamine produced by the method of invention is useful for treating arthritis, preferably osteoarthritis and rehumancia arthritis; in humans and pet animals. The hexosamines are also useful for treating pain, inflammation or inflammation-associated disorder. The hexosamines are also useful for treating other articular coint damage or diseases such as spondyloarthropathy, gouty arthritis, systemic lupus erythematosus and juvenile arthritis and other joint damage disease conditions such as tendinitis, bursitis, connective tissue consumine without compromising its clinical effectiveness and in a form that is acceptable for delivery to a broad class of patients. Consumption of edible portions of transgenic plants containing hexosamines provide a supply of hexosamine to the subject in a conventional and easily consumpted and consumine and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and provides and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The specification describes a method for producing chitin or chitosan by a fermentation process. The method involves culturing in a fermentation medium a microorganism which comprises one or more genetic modifications that result in an increase in the activity of glutamine-fructose-6-boosphate amidotransferase (also known as glucosamine-fructose-6-composamine-6-phosphate synthase, and encoded by the GFA1 eukaryotic generated the glms bacterial gene), glucosamine-6-phosphate acetyltransferase (encoded by GNA1), chitin synthase or chitin deacetylase (encoded by CDA1) and CDA2), or in decrease in the activity of N-acetylglucosamine-6-phosphate deaminase, chitinase and chitosanse, and collecting the chitin or chitosan. The method is useful for producing chitin or chitosan by utilizing microorganisms such as a fungar or A. nidulans. The method enables high quantities of chitin and chitosan to be produced cost effectively. The present sequence is encoded by a GNA1 gene, and is a glucosamine-6-phosphate acetyltransferase. The GNA1 gene, and is a glucosamine-6-phosphate

The invention relates to constructing (M1) a strain of diploid fungal cells in which both alleles of a gene are modified, comprising modifying cone allele by insertion or replacement by a cassette having an expressible selectable marker and modifying other allele by insertion or replacement fragment with a heterologous promoter, so that expression of the second allele by the promoter. (M1) is useful for constructing a strain of diploid fungal cells in which both alleles modified are useful for identifying a gene that contributes to the survival or growth of a fungus, a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a fungus to an antifungal cagent, an antifungal agent that inhibits the growth of a diploid fungus contributes to the resistance of a diploid fungus to an antifungal cagent, an antifungal agent that inhibits the growth of a diploid fungus contribute the suspentic agent for treatment of a mammalian disease. (M1) is useful for identifying a compound which modulates the cativity of a gene product, preferably enzymatic activity, carbon compound catabolism, biosynthetic, transporter, transcriptional, compound catabolism, biosynthetic, transporter, transcriptional, ability to inhibit growth or proliferation of C. albicans cells and for treatming infection by C. albicans. The present sequence is that of an essential candida albicans pracin used in the method of the invention. The specification describes a method for producing chitin or chitosan by a fermentation process. The method involves culturing in a fermentation conditions a fermentation process. The method involves culturing in a fermentation and increase in the activity of glutamine-fructose-for phosphate amidotransferase (also known as glucosamine synthetase and glucosamine-f-phosphate synthase, and encoded by the GFAI cukaryotic gene can the glms bacterial gene), glucosamine-6-phosphate acceptlic gene cond the glms bacterial gene), glucosamine-6-phosphate acceptlic gene cond the glms bacterial gene), glucosamine-6-phosphate acceptlic gene cond the glms bacterial gene), glucosamine-6-phosphate deacetylase (encoded by CDAI and CDA2), or in decrease in the activity of N-acetylglucosamine-6-phosphate deacetylase, clacked by CDAI condition or chitosan by utilizing microorganisms such as chitosan confiction or chitosan. The method is useful corrections fungus (e.g. Aspergillus, Absidia or Rhizopus), preferably S. Cerevisiae, A. niger or A. nidulane. The method enables high quantities of chitin and chitosan to be produced cost effectively. The present sequence represents a glucosamine-6-phosphate accetyltransferase, encoded by a GNAI gene which may be used transform microorganisms for use in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     N-acetylglucosamine-6-phosphate deacetylase;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel purified or isolated nucleic acids of essential genes of Aspergillus fumigatus. The isolated nucleic acids of the invention are used to treat or prevent infections by apthogenic organism such as A. fumigatus, to treat a non-infectious disease in a subject (e.g. cancer), to prevent or contain contamination of an object by A. fumigatus, to prevent or inhibit formation on a surface of a copyressing recombinant protein for characterisation, screening or therapeutic use, as markers for host tissues in which the pathogenic corganisms invade or reside, for comparing with the DNA sequence of A. fumigatus to identify duplicated genes or paralogues having the same or similar biochemical activity and/or function, for comparing with DNA sequence of their related or distant pathogenic organisms to identify potential orthologous essential or virulence genes, for selecting and making oligomers for attachment to a nucleic acid array for examination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ς,
.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              interaction. The polypeptides may be used to raise antibodies or to elicit immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as a marker for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        host tissues in which pathogenic organism invade or reside, and to isolate correlative receptors or ligands in the case or virulence factors. This sequence represents a protein of one of the essential genes of Aspergillus fumigatus of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             QYNPMVIVDKRTETVAAŢGNIIIERKIIHELGLCGHIEDĮAVNSKYQGQGLGKLLIDQLV 120

modification that increases the activity of (II), glucosamine-6-phosphate synthase (III) or glucosamine-6-phosphate deaminase (IV), or decreases the activity of glucosamine-1 phosphate N-activity of glucosamine-1 phosphate N-acetyltransferase (V), and (D) and collecting the product, which is chosen from the group consisting of glucosamine-6-phosphate, N-acetylglucosamine-6-phosphate, N-acetylglucosamine-1-phosphate, and N-acetylglucosamine-1-phosphate, and N-acetylglucosamine-The present sequence was used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a method (M1) for producing glucosamine and N-acetylglucosamine by fermentation. The method comprises (a) culturing in a fermentation medium a microorganism (1) which comprises endogenous glucosamine-6-phosphate acetyltransferase (11) and a genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3 LPDGFYIRRMEEGDLEQ-VTETLKVLTTVGTITPESFSKLIKYWNEATVWNDNEDKKIMQ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in melectronic forum from the US patent office at available in electronic forum from the US patent office at the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomanna, ignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of the coll cycle pathway. For conferring combination in plants, for improving yield by modification of the coll cycle pathway. For conferring combination in plants, for improving yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert polypeptide that can be used in the recombinant DNA construct of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for conferring increased resistance to plant disease, or for

The invention relates to isolated nucleic acids encoding novel human transferase proteins (NHP). The nucleic acids and proteins are useful for diagnosis, drug screening, clinical trial monitoring and treatment of diseases and disorders e.g. breast and prostate cancer. NHPs can also be useful for augmenting the efficacy of chemotherapeutic agents used in treatment of breast or prostate cancer. The nucleic acid is also useful in NHP gene regulation, and as antisense primers in amplification reactions of NHP gene sequences. NHPs are useful for producing antibodies. The present sequence represents a novel human transferase

The proteins play important roles in the regularion of cellular signalling and proliferation. The HTFS proteins are useful for screening compounds for their effectiveness as agonists or antagonists of transferase activity, or for compounds that specifically bind to an HTFS protein.

Disorders which may be treated using such compositions include cell proliferative disorders and immune disorders. For example, diseases which may be treated include atherosclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human transferase polypeptides and polynuclectides useful for diagnosis, prevention and treatment of cell proliferative and immune system disorders and for identifying agonists and antagonists.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   63
                                                                                                                                                                                                                                                                                                                                                                                hybridisation probes useful in mapping the naturally occurring genomic sequences. HTFS, and its catalytic or immunogenic fragments are useful for screening libraries of compounds in a variety of drug screening techniques. Antibodies which specifically bind HTFS may be used for the diagnosis of disorders associated with the expression of HTFS, or in assays to monitor patients being treated with HTFS or agonists, antagonists or inhibitors of HTFS. The present sequence represents an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; transferase; 25324 transferase; 50287 transferase; cancer; 28899 transferase; 47007 transferase; 42967 transferase; angiogenesis; kynurenine aminotransferase; phosphatidyl transferase; brain tumour; cell proliferation; cell differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               :| :| :| | :| | | 37 EGLVLRPLCTADLNRGFFKVLGQLTETGVVSPEQFMKSFEHM------KKSGDYY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    요
                                                                   specification describes 25324, 50287, 28899, 47007 and 42967 transferases. The 25324 transferase is homologous to kynurenine aminotransferase. The 247007 transferase is homologous to kynurenine transferase and polypubleotides may be used for the diagnosis or the identification of a compound capable of treating cancer (e.g., lung, breast, or colon) or a disorder characterised by abbrrant angiogenesis (e.g., brain tumour angiogenesis). Modulators of the transferases may be used to treat the above, or modulate cellular proliferation and/or differentiation, or a subject at risk of the above disorders
                                                                                                                                                                                                                                                                                                                         7

The present sequence is that of a human FLJ10607 polypeptide. This is the human orthologue of a Caenorhabditis elegans protein that has been shown methods for using FLJ10607 axin pathway. The invention provides methods for using FLJ10607 axin modifier genes and polypeptides to identify FLJ10607—modulating agents that are candidate therapeutic agents useful for the diagnosis and treatment of disorders associated with proliferative or impaired axin function and/or FLJ10607 function, especially proliferative disorders such as cancer. Preferred FLJ10607—modulating agents specifically bind to FLJ10607 polypeptides and restore axin function, or are nucleic acid modulators such as antisense oligomers and RNA interference (RNAi) agents that repress FLJ10607 gene expression or product activity, e.g. by binding to and inhibiting the respective product activity. Candidate FLJ10607 modulating agents are tested with an assay system comprising a FLJ10607 polypeptide or nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    64 PMVIVDKRTETVAATGNIIIERKIIHELGLCGHIEDIAVNSKYQGQGLGKLLIDQLVTIG 123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Use of FLJ10607 polypeptide or nucleic acid for identifying a candidate Axin pathway modulating agent, modulating an Axin pathway of a cell, or

                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                          The present sequence is that of a human FLJ10607 polypeptide. This is the human orthologue of a Caenorhabditis elegans protein that has been shown to have the ability to modify the axin pathway. The invention provides methods for using FLJ10607 axin modifier genes and polypeptides to identify FLJ10607-modulating agents that are candidate therapeutic agents useful for the diagnosis and treatment of disorders associated with defective or impaired axin function and/or FLJ10607 function, especially proliferative disorders such as cancer. Preferred FLJ10607-modulating agents specifically bind to FLJ10607 polypeptides and restore axin function, or are nucleic acid modulators such as antisense oligomers and FNA interference (RNN1) agents that repress FLJ10607 gene expression or product activity, e.g. by binding to and inhibiting the respective nucleic acid (i.e. DNA or mNNA). Candidate FLJ10607 modulating agents are tested with an assay system comprising a FLJ10607 polypeptide or nucleic

                                                           AAF22422 to AAF22626, AAF22627 to AAF22773 and AAF22774 to AAF23014 represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively. AAB63463, AAB63462 to AAB63722 to AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,

# Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated

- permanent accession numbers. The new UniProt record may not contain the previous temporary numbers from the most recent version of UniProt. These sequences have been assigned new Please note that the curators of the UniProt database have purged some temporary accession accession number.
- extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein If you encounter an accession number from an older search run against UniProt (results file Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

members of the public who may encounter UniProt temporary accession When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or numbers.
